Introduction

Role of the European Open Science Cloud (EOSC):

Develop a single European market for research data and services

- Enable interdisciplinary research
- Develop a web of FAIR Data and Services
- Support Open Science

CERN:

- Aligns with the Open Science Vision
- Examples:
 - CERN Open Data Policy
 - EOSC Projects

Historical Commitment to Open Science

**Open Science part of the CERN convention
(signed In 1953)**

2014: Open Access Policy

**All CERN physics results to be published
Open Access**

CERN Open Data Policy

- **Launched in December 2020**
- **Aim: make scientific research reproducible, accessible, and collaborative**
- **Agreed upon the 4 experiments**
 - A blueprint for other High Energy Physics projects
- **Data released ~5 years after collection**
 - Through the CERN Open Data Portal
 - Follow FAIR Principles

Explore more than
two petabytes
of open data from
particle physics!

Which data ?

Level of complexity of HEP data: defined by the Data Preservation and Long Term Analysis in High Energy Physics Study Group

Level 1	Peer-reviewed publications and additional information and data linked to the publications
Level 2	Data for education and outreach provided in simplified format
Level 3	Reconstructed subset of data with the necessary level of details for algorithmic, performance and physics studies
Level 4	Raw data

**Data released thanks to
CERN Open Data Policy**

Which use cases ?

Reinterpretation and reanalysis of physics results

Education and outreach

data analysis for technical and algorithmic developments

Physics research

Examples of services supporting Open Data

- User-driven development addressing a variety of physics use cases
- Enabling long-term preservation and reuse for data, code, analyses, etc..
- Open source software
- Open access licenses
- Data policies with embargo periods
- Persistent identifiers
- Data & software citation
- Machine readable, high quality metadata
- Provisions for big data and high complexity
- Aligning with FAIR principles
- Adjustable to be discipline agnostic

European Open Science Cloud (EOSC) Projects

**EUROPEAN OPEN
SCIENCE CLOUD**

EOSC Projects

CERN involved in several EU projects working towards Open Science:

- R&D in archiving and data preservation services
- R&D in federated services for cloud synch & share
- Onboarding commercial cloud for European research Community

OCRE | Open Clouds for Research Environments

A consortium formed by:

Aim: Accelerate cloud adoption in the European research community

Budget: 9.5M euro

Starting Date: January 2019

Duration: 36 Months

CERN activities in OCRE

Cloud voucher distribution to the Long Tail of Science

Aim: stimulate the uptake of commercial digital services by researchers in Europe

Cloud Voucher Distribution

GEANT ran Call off ran in Q2 2019 under GEANT IaaS framework

- Total Amount procured: €500 000
- Voucher face value: €500 to €2000

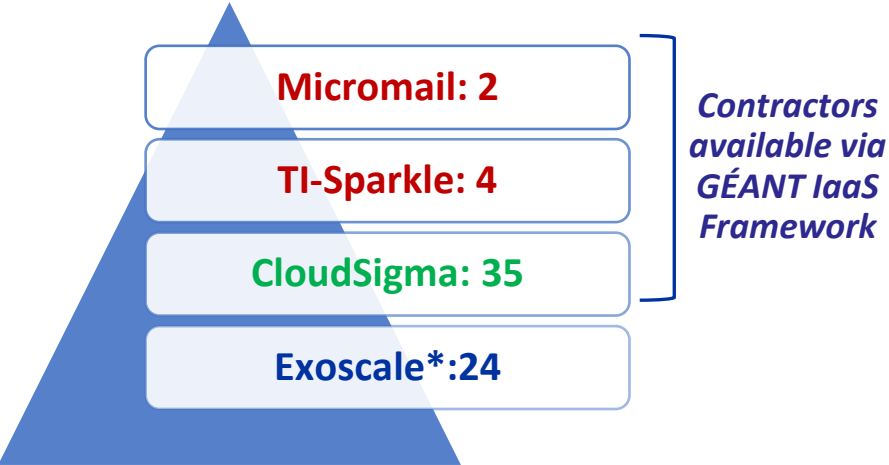

3 cloud providers:

3 distribution channels:

Cloud Vouchers Distribution

Researchers Gender

Researcher Fields

* Open Call via CERN openlab

Feedback and Lessons Learned

Small scale, time limited calls
= easier to manage

Training materials and support
= key to increase uptake

Vouchers face value of several thousands of Euros
= necessary to ensure results

Voucher usage tracking & re-allocation of unused vouchers
= essential to avoid wasted resources

Exit strategies & re-allocation
= crucial to ensure uptake

Next steps

Expand the voucher program

Subject to the contract being adjourned by GEANT

Test and validate the 27 cloud platform available in OCRE

Benchmark in Machine Learning, HPC...
